Job Description	Senior Full Stack
Location	This position is in-office or remote
Job Type	Full Time
Relocation Provided	No
Compensation	Commensurate with experience

Enquire AI is on a mission to make organizations knowledge efficient. We provide the world's leading enterprises an AI-powered platform to leverage global subject-matter expertise in real time.

Our uniqueness is defined by our software, which starts with Network Pulse. Through Network Pulse, all those clients need to do is submit a question. From there, our AI-driven multifactor algorithm identifies the experts best placed to provide tailored, actionable analysis in 250 words, which smartly arrives in the client's dashboard within minutes. From there, clients can assess answers according to the experts' professional background and platform ratings and go deeper with any expert of their choice on a Pulse Call or collaborate longer-term on a Pulse Project. We have made this knowledge journey uniquely empowering and seamless for the client by fitting it to their established workflows for data gathering and research.

Founded in 2018, Enquire AI is headquartered in Washington, D.C.

This position reports to the Head of Engineering.

The Senior Full Stack Developer will
- Lead the development efforts and the feature implementation strategies
- Act as mentor to the development team during the sprints, and oversee the source code quality
- Actively participate in the development process of the web platform
- Actively participate in the process automations, architecture, and infrastructure handovers

Qualifications:
- 5+ years of successful technical experience in full stack development
- 3+ years of successful project management or as a scrum master
- 3+ years of experience using AWS cloud infrastructure components and CI/CD

Required Programming Languages and Frameworks:
- Java / Spring / JPA / Hibernate
- JavaScript / Angular
- SQL (PostgreSQL)
- Python / Flask
- Shell

Desired Skills:
- Extensive experience in HTML, CSS, Angular Framework
- Strong experience in user experience, web design, user interfaces
- Great appreciation for and mindset for clean code and simplicity
- Ability to manage multiple requesters and priorities, and present opportunities, limitations, trade-offs and bring innovative ideas to satisfy the needs
- Strong experience in designing data-focused platforms and mobile applications
- Strong experience in user behavior data analysis (monitoring datasets, google analytics, …)

Additional Personal Attributes:
- Superb capacity to listen with the intent to understand and to solve
- Successful at piloting a team toward a common goal, motivating the team in a positive way despite the challenges, orchestrating, and balancing the business needs and workloads
- Driven, resourceful, and autonomous individual able to manage the team efforts with minimal supervision to meet objectives
- Critical, analytical, and organized individual able to manage timelines, define milestones, and deliver accordingly
- Team player, respectful of others, with a high level of professional and personal integrity
- Problem solver – not afraid to think outside of the box
